

Scrub Seal

Scrub Seal provides a watertight membrane to delay moisture from penetrating the pavement structure.

A specialized, cost-effective surface treatment that heals cracks and extends pavement life by sealing and protecting from the elements.

FEATURES & BENEFITS

- Extends pavement life by sealing and protecting from moisture penetration
- Provides a new skid-resistant surface texture
- Saves time and money by reducing or eliminating the need for reconstruction
- Specially formulated emulsion, rejuvenates age-hardened and oxidized pavement and helps heal cracks

Scrub Seal

Preserve pavements,
reduce maintenance, seal
cracks, delay reconstruction
and potholes.

Scrub Seal is a crack-filling, rejuvenating seal used to preserve deteriorating roads. Unlike traditional surface treatment, Scrub Seal uses a custom designed broom trailer to force or “scrub” a specially formulated rejuvenating asphalt emulsion into the cracks of the road.

The emulsion is sprayed onto the road using a traditional asphalt distributor truck. The truck pulls a trailer designed to scrub the emulsion into the surface with a series of broom heads. A conventional chip spreader then applies aggregate on top of the emulsions.
